ANSWER SHEET

9-17-1

Robots - Assistants

•Introduction:
As our school library is being expanded, I am writing a proposal suggesting what you could provide to benefit the students.

•My suggestion:
Our library is already grand and expanding it further will lead to it containing a good deal more material for students to read. But one problem starts to stand out: the possibility of getting lost in those seemingly endless shelves filled with books. To solve this, i suggest using modern technology.

•How does it work:
Some shops have already ~~implemented~~ implemented machines alike. they work as following: you ~~enter~~ enter the name of the product you would like to find and it shows you how to get to the ~~position~~ position of the item from where you are standing. If you dont know what exactly to buy, then it may suggest different goods. In the case of a library, people will enter either the titles of the books or the names of the authors.

•What is needed:
First of all to implement this technology, we need to fund it. After the goal is reached, a person or a group of people should create a database with all the books in the library and information about them like the author, its genre and so on. Then there should be a map with the placement of all the books. Lastly, coding the program and placing the robot-assistant.

•benefits:
As i have mentioned before, getting lost in the

1/12

ANSWER SHEET

9-17-1

library is a problem, but robots like this may not only solve it, but also help discover new material ~~for~~ for students to read.

· Conclusion.

~~Even though this innovation may be pricey, the benefits from implementing it~~ . this innovation will be really useful. ~~Even~~ Even though it is not that cheap, but students and parents will be happy to financially support this tecnology, so they could have a slightly better experience at school. I hope you consider impementing this idea
